

SupaDev

AI-Powered Agentic IDE
for Bharat's Developers

AI for Bharat Hackathon | Track: AI for Learning & Developer Productivity

Madhur Jain • iOS Developer • github.com/Madhurr

■ The Problem

Indian developers are drowning in tool fragmentation

Pain Points

- Devs juggle 5-8 tools daily
- ■ 40% productivity lost to context switching
- No IDE has autonomous multi-agent pipelines
- Cursor \$20/mo, Copilot \$19/mo — unaffordable
- AI IDEs need cloud — India's internet is spotty

Scale of Impact

- 1.5M+ CS graduates annually in India
- ■ ■ 5M+ junior developers need better tools
- ■ Tier 2/3 city devs lack mentorship
- 2M+ freelancers need productivity boost
- 9M+ Indian developers (20% YoY growth)

■ Our Solution

One IDE. Multiple AI Agents. Zero context switching.

■■ Full IDE

Editor, terminal, Git, debugger
35+ languages, 14 themes

■ AI-Native

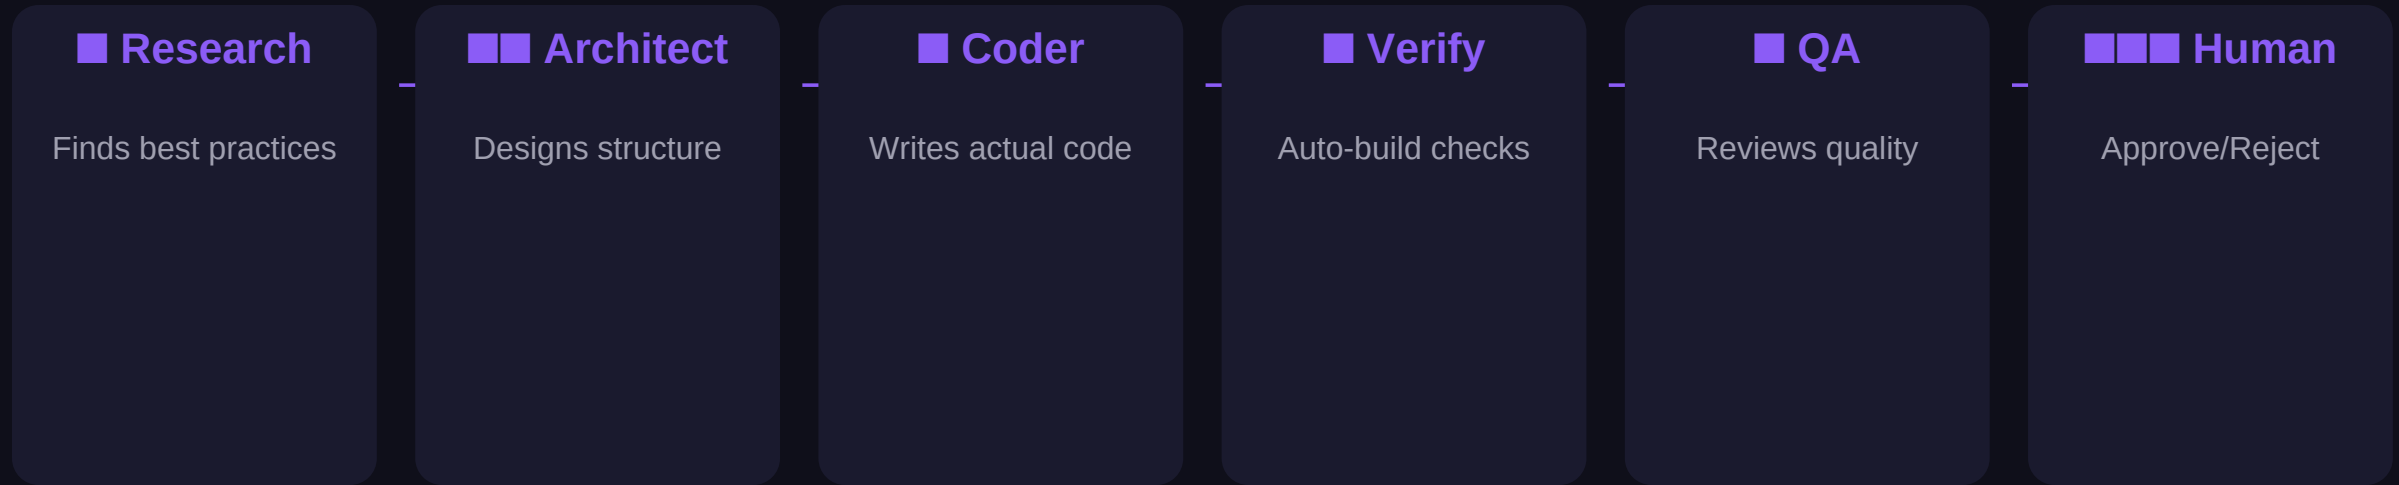

Ghost completions, ■K bar
Error fix, smart docs

■ Agentic Pipelines

6-stage autonomous agents
Research → Code → Review

■ Agentic Pipeline — The Differentiator

Autonomous multi-agent coding pipeline — no other IDE does this

Key Features

- Each agent has a specialized role ("Senior Developer", "Senior QA Engineer")
- Git worktree isolation — safe parallel work on separate branches
- Max 3 re-iteration rounds — QA rejects → Coder fixes → converges on quality
- You review syntax-highlighted diffs — approve or send back with feedback

■ AI Features — Not Just Autocomplete

■■ Ghost Completions

Context-aware code suggestions, Tab to accept

■ ■K Command Bar

Natural language → Modify / Generate / Explain

■ AI Error Fix

Build fails → sparkle icon → one-click fix with inline

■ Smart Documentation

Option+Click → AI-generated docs with params

🍰 ■ AI Commit Messages

Reads your staged diff → writes meaningful com

■ Intelligent Router

Auto-routes to Fast/Balanced/Powerful model per t

All AI features work through a local gateway — your code, your keys, your privacy

■■ Professional-Grade IDE

Not a toy — a full IDE with AI superpowers

Code Editor

Tree-sitter syntax for 35+ languages
91 capture types, 14 premium themes
Minimap, breadcrumbs, line numbers

Git Integration

Source control, visual commit graph
Blame with Gravatar avatars
Hunk-level staging, merge conflict UI

Build & Run

One-click for Swift/Node/Python/Rust/Go
Xcode-style title bar controls
Scheme & simulator picker

Debugging

LLDB — breakpoints, step through
Variable tree, call stack
Debug console REPL

■■ Impact on Bharat

Democratizing world-class development tools

■ 1.5M Students/yr

AI agents teach while building

■■ Tier 2/3 Devs

Pro IDE, no expensive subscription

■ 2M+ Freelancers

3-5x productivity boost

■ Startups

Ship like a 10-person team

Privacy-First Architecture

■ Code stays local • ■ Your API keys, your data • ■ Localhost gateway • ■ Open-source core

■■■ Technical Architecture

SupaDev IDE (SwiftUI + AppKit Native)

■ Code Editor

■ Terminal

■ Source Control

■ Pipeline System

■ AI Engine

VaultBot Gateway (Node.js + WebSocket)

■■ Intelligent Router

■■ Agent Orchestrator

■■ JSON-RPC

AI Providers

■ Claude

■ GPT-4

■ Gemini

■ Bedrock

■ Ollama

SwiftUI + AppKit | Tree-sitter | SwiftData | WebSocket | LLDB

■ ■ AWS Integration

Amazon Bedrock

Multi-model AI for pipelines

AWS Lambda

Serverless agent execution

Amazon S3

Pipeline artifact storage

CodePipeline

One-click deploy from IDE

Cognito

Auth for collaboration

CloudWatch

Analytics & monitoring

■ What We've Built — Working Software

This is not a concept — it's real, tested code

50K+

Lines Swift

80+

Files

35+

Languages

14

Themes

6

Stages

91

Captures

■ 6-stage agentic pipeline — tested end-to-end

■ 3 AI features — completions, ■K, error fix

■ Full Git — source control, graph, blame, worktrees

■ LLDB debugger — breakpoints, variables

■ Code review — syntax-highlighted review window

■ iOS companion — 11 files, ~4K lines

■ Privacy-first — all local, no telemetry

■ 14 premium themes — Xcode Dark to Synthwave

■ Business Model & Go-to-Market

Free — ■0

Full IDE, 50 AI queries/day

Pro — ■800/mo

Unlimited AI, agentic pipelines

Team — ■2K/user/mo

Collaboration, cloud deploy

Go-to-Market Strategy

1. Open-source core IDE → build developer community
2. Target Indian dev meetups, college hackathons
3. Partner with 100+ coding bootcamps in India
4. AWS Marketplace listing for enterprise

TAM: 9M+ developers in India (growing 20% YoY)

■ Roadmap & Vision

Q1 2026

macOS beta
10K adopters

Q2 2026

iOS + Linux
SourceKit-LSP

Q3 2026

Team features
Cloud deploy

Q4 2026

Enterprise
Voice coding

"Make every developer in Bharat as productive as a
10x engineer — powered by AI agents that build
and ship alongside you."

SupaDev: Your AI. Your Code. Your Superpower. ■
