

SupaDev

AI-Powered Agentic IDE for Bharat's
Developers

One IDE. Multiple AI Agents. Zero Context Switching.

| The Problem: Fragmentation & Cost

Tool Fragmentation

- > Developers juggle 5-8 tools daily (Editor, Terminal, Git, AI Chat).
- > 40% of productivity is lost solely to context switching.
- > No current IDE offers autonomous multi-agent pipelines locally.

₹ Accessibility in Bharat

- > Cursor (\$20/mo) & Copilot (\$19/mo) are unaffordable for students.
- > Existing AI IDEs require constant high-speed cloud connectivity.
- > India's spotty internet in Tier 2/3 cities hinders adoption.

| Impact on Bharat

9M+ Developers are currently building in India, growing 20% YoY.

🎓 **1.5M+ CS Graduates** annually needing mentorship.

🏢 **Tier 2/3 Developers** lack access to senior guidance.

💻 **2M+ Freelancers** need tools to boost output 3-5x.

| The Solution: SupaDev

Full IDE

A complete replacement for VS Code. Built-in Terminal, Git, and Debugger. Supports 35+ languages with 14 premium themes.

AI-Native

Ghost completions, Smart Documentation (Option+Click), and Command Bar (⌘K). AI explains errors and fixes them with one click.

Agentic Pipelines

Autonomous agents that Research, Architect, Code, and QA your software. Like having a senior developer pair-programming with you.

| 6-Stage Agentic Pipeline

The Key Differentiator: Autonomous software development flow.

Beyond Autocomplete

Ghost Completions

Context-aware code suggestions that appear as you type. Simply press Tab to accept complex logic blocks instantly.

Command Bar

Natural Language to Code. "Make this button blue and add a bounce animation" → SupaDev writes the CSS/SwiftUI code.

AI Error Fix

Build failed? Click the sparkle icon. SupaDev analyzes the compiler error and applies a one-click fix with a diff review.

Smart Docs

Option+Click any function to see AI-generated documentation, parameter explanations, and usage examples instantly.

Professional-Grade

Not a toy. A full IDE supercharged with AI.

Tree-sitter Syntax: High-performance highlighting for 35+ languages.

Git Integration: Visual commit graph, blame with Gravatar, and hunk-level staging.

LLDB Debugger: Full breakpoint support, variable inspection, and debug console.

Build & Run: One-click execution for Swift, Node, Python, Rust, and Go.

| Privacy-First Architecture

SupaDev IDE

Native SwiftUI + AppKit

- > Code Editor (Tree-sitter)
- > Terminal & Source Control
- > Pipeline System
- > AI Engine

VaultBot Gateway

Node.js + WebSocket (Localhost)

- > Intelligent Router & Agent Orchestrator
- > **AI Providers:** Claude, GPT-4, Gemini, Bedrock, Ollama
- > **All code stays local. No telemetry.**

| Powered by AWS Cloud

Amazon Bedrock

Multi-model AI access (Claude, Llama) for agent pipelines with intelligent routing.

AWS Lambda

Serverless agent execution. Scale pipelines on demand and pay only when agents run.

Amazon S3

Secure pipeline artifact storage, staging snapshots, and versioning backups.

CodePipeline

One-click deployment directly from the IDE to production environments.

| What We've Built

Real, working software. Not just a concept.

50K+

Themes

Business Model

Tier	Price	Features
Free Tier	₹0	Full IDE, 50 AI queries/day, Community Support
Pro Tier	₹800 /mo	Unlimited AI, Full Agentic Pipelines, Priority Models
Team Tier	₹2000 /user/mo	Shared Pipelines, Cloud Collaboration, One-click Cloud Deploy

Roadmap 2026

| Go-to-Market Strategy

Open Source

Release core IDE as open source to build trust and a vibrant developer community.

Grassroots

Target Indian dev meetups, college hackathons, and partner with 100+ coding bootcamps.

Marketplace

List on AWS Marketplace for seamless enterprise adoption and billing integration.

"Make every developer in Bharat as productive as a 10x engineer — powered by AI agents that understand, build, and ship alongside you."

— SupaDev Vision
